

## *CSCI PowerExtract for GrowthPower*

---

**PowerExtract™**: Allows the exporting of all databases, and all elements within the database (including extra fields possibly used by custom transactions). One file is created per dataset within each database.

User interface modeled after standard transactions allows for easy navigation and use by the end user or IT department.

A summary report identifies the file name, location, and the number of records extracted from the dataset.

Documentation provided identifies each dataset, associated extract file and location and the file layout.

All extra fields (string, real and long) are also extracted.

The user interface allows for the selection of a database or dataset.

When executed in test mode the program will extract the first one thousand (1000) records from the dataset. This option is valuable during the initial data acceptance testing process.

Use this utility to extract data from your GrowthPower system into flat files.

Combined with our optional PowerBase you can create a relational database of your legacy data for access using reporting tools of your choice or you can purchase our inquiry system that includes Part Inquiry, Bill of Material Inquiry and others.

Priced by the database; additions or changes to the programs will be quoted separately.

### **How it Works:**

The program(s) are written in the native programming language for GrowthPower and all fields are decoded as required.

The user may choose to extract an entire database, or a dataset within a database.

The user may choose to perform a test extraction which will process the first one thousand (1000) records from the dataset(s).

By default the programs creates the file without field separation indicators, but can easily be enhanced to provide delimited files.

### **Modules Available:**

- Accounts Payable
- Accounts Receivable
- Data Collection
- DD Contracts
- Factory Ledger
- General Ledger
- Job Control
- Lot Control
- Manufacturing
- Net Bookings
- Product Configurator
- Production Control
- Purchase Orders
- Quotes and Estimating
- Sales Orders
- Vendor Quotes
- Warranty Tracking
- Warranty Tracking Plus

### **Pricing\*:**

Each program, one per database, is \$ 1500.00.  
Discounts for existing CSCI customers.

### **Included:**

The purchase includes all documentation for file naming conventions and layouts.

A support representative will work with you to process test files in your training environment for each transaction processed. We work with you to make sure the programs are adding or updating the data as you require.

## *CSCI PowerExtract for GrowthPower*

---

### **Options:**

Specify a file delimiter for your extraction in place of fixed length files.  
Purchase PowerBase to create a relational database for your GrowthPower data (SQL Server and Oracle currently supported).

### **Information:**

Pricing is subject to change without notice. Pricing is not valid until a project estimate is provided by Crawford Software Consulting, Inc.

The program is licensed to a specific HP3000 (HPSUSAN),

Pricing is for a license to use the executable program only. No source code is included.

Programs are release dependent.

Screen shots of the programs or a working demonstration available on request.  
Please allow 2 - 3 weeks for scheduling.
